Mind Research Network

Advancing neuroimaging and genetics research to better diagnose mental illness, brain injury, and other brain disorders earlier and more accurately than is currently possible. Utilizing genetic and imaging data to find genetic markers of brain illness which may help discover more individualized treatment. Continuing work that gives clinicians an improved ability to predict relapse in recovering stimulant addicts and improve treatment and intervention strategies. Continuing work to identify youngsters who experience behavior changes that may indicate psychotic illness, and to intervene and treat the young person to avoid disruption of a normal life.
