Technology Licensing & Company Creation

New Mexico Start-Up Factory (NMSUF) is bringing laboratory technologies to market. In our innovative model we work with scientists looking to commercialize their innovations. Through our program, technologists are coached through validation of the technology, market, and are paired with the right management team. A commercialization and business plan/model is formed and if all signs point to a good market opportunity and promising technological development, a company is formed.

Companies and scientists who successfully complete the educational piece of the program are open to investment from the NMSUF Fund.

Details

Minimum Age: 18

Restrictions: Must have licensable technology from a research institution

Parent Organization

New Mexico Start-Up Factory

New Mexico Start-Up Factory (NMSUF) is bringing laboratory technologies to market. In our innovative model we work with scientists looking to commercialize their technologies by coaching them through intellectual property validation, market evaluation, and helping them find the right management and technical team. A commercialization and business plan/model is created and if all signs point to a sound market opportunity with promising technological development, a company is formed. Companies and scientists who successfully complete the educational piece of the program are open to investment from the NMSUF Fund. To date NMSUF has created 10 technology companies - all based on innovations from New Mexico research institutions, and 100% have remain in the State.
