

SHARE new mexico™

Project ECHO

The heart of the ECHO model™ is its hub-and-spoke knowledge-sharing networks, led by expert teams who use multi-point videoconferencing to conduct virtual clinics with community providers. In this way, primary care doctors, nurses, and other clinicians learn to provide excellent specialty care to patients in their own communities. Project ECHO links expert specialist teams at an academic hub with primary care clinicians in local communities. Primary care clinicians, the spokes in our model, become part of a learning community, where they receive mentoring and feedback from specialists. Together, they manage patient cases so that patients get the care they need.
