Climate Change

The San Juan Basin is ground zero for climate change. We are among the biggest polluters of greenhouse gas emissions in the nation and uniquely vulnerable to projected climate changes such as drought, increased fire-severity, and a decreasing snowpack.

Our Coal and Oil & Gas programs directly address causes of climate change. The Alliance is also advocating for a clean energy future. As more fossil-fuel based energy sources are retired, our community has a historic opportunity to replace them with an energy economy built on renewables. The Alliance plans to play an important role in making that future vision a reality.

Parent Organization

San Juan Citizens Alliance

San Juan Citizens Alliance advocates for clean air, pure water, and healthy lands -- the foundations of resilient communities, ecosystems and economies in the San Juan Basin. In addition to working in both Colorado and New Mexico, we have long-standing partnerships with Navajo Nation advocates as members

of the Nation often experience the brunt of climate and health impacts from the overwhelming amount of fossil fuel development in the Four Corners.
