## School of Dreams Academy Robotics

VEX Robotics students learn lifelong skills in communications, project management, critical thinking and teamwork while using science, technology, engineering and math (STEM). VEX Robotics uses a programming language and a design system, which includes structural parts, gears, electric motors and wheels. Students use a hands-on approach to STEM by designing and building an innovative robot to play against other teams in a game-based engineering challenge. Tournaments are held throughout the year at a regional and state level with hopes of an invitation to the VEX Robotics World Championship held each April. Globally The Robotics Education & Competition Foundation offers the largest and fastest growing middle school and high school robotics program.
