## **Doctor Match Program**

There are a handful of mesothelioma specialists across the country, most working at prestigious medical centers and hospitals that are equipped with cutting edge technology and involved with the latest research and on-going clinical trials. We have relationships with these specialists and are able to put patients in touch with the best doctor to suit their needs.

## **Parent Organization**

### **The Mesothelioma Center**

We are a national advocacy group that works to spread awareness about asbestos-related cancers, such as mesothelioma. We offer a plethora of free information and services, including Patient Advocates who guide patients to treatment centers and specialists in their areas. We offer an online support group every month where patients and their loved ones can share feelings and experiences. Mesothelioma is a deadly cancer that affects the lining of the lungs, abdomen or heart. The rare disease has no cure, making a diagnosis especially distressing for patients and their families. The goal of treatment is typically to slow the spread of the disease, ease symptoms and extend life expectancy.
