## Parent Organization

### The Mesothelioma Center

We are a national advocacy group that works to spread awareness about asbestos-related cancers, such as mesothelioma. We offer a plethora of free information and services, including Patient Advocates who guide patients to treatment centers and specialists in their areas. We offer an online support group every month where patients and their loved ones can share feelings and experiences. Mesothelioma is a deadly cancer that affects the lining of the lungs, abdomen or heart. The rare disease has no cure, making a diagnosis especially distressing for patients and their families. The goal of treatment is typically to slow the spread of the disease, ease symptoms and extend life expectancy.
